# Movana

Pure style. Perfect safety.

Outward opening access  
in less than 3 seconds

## Engineered safety – in style.

When you first see a Movana cubicle, safety is not what strikes you. The LED occupancy indicators outside and the full-length locking handle inside are probably what will.

But if someone collapses against the inside of the door, that's when the safety features come to the fore. Outward opening access, from outside, within eight seconds.

Now that truly is a first of its kind.

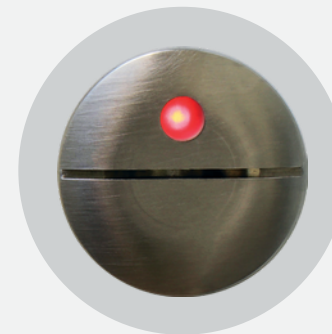

## Movana: key features

### Emergency access in 3 seconds

In an emergency, the occupancy indicator is twisted anti-clockwise out of the door with a coin (or any other such item) and used to pull a cord that disengages the door stop and allows the door to swing outwards.

### LED occupancy indicator

The occupancy indicator is tastefully styled in brushed stainless steel, and flashes red when the cubicle is occupied, providing a striking dimension to the washroom.

### Premium concealed hinges

The concealed fall-to-close hinges maintain a completely uninterrupted surface to both sides of the door and have an integral soft-close device to enhance the washroom experience.

### Latch-and-lock handle

A full-length vertical handle in stainless steel effect aluminium adds a unique touch of class within the Movana cubicle, providing greater ease of use and foot operation if users prefer.

## Movana – the story

Movana is the result of many hours in product development, focused on enabling full compliance with Doc-M guidance while maintaining perfect style in the washroom.

Doc-M 5.4 Sanitary accommodation will satisfy Requirement M1 or M3 if:

WC compartment doors... have an emergency release mechanism so that they are capable of being opened outwards, from the outside, in case of emergency.

Until now, with full-height, flush fronted cubicles, compliance with Doc-M has required 'sacrificial access' – force your way in, or attempt to lift the heavy full-height door off its hinges. This not only delays access to an unwell occupant, but risks injuring them in the process.

We set ourselves to create a cubicle system that not only raised the bar in design style, but that truly provided the safety that Doc-M intends.

Full-height and made to measure with 44mm thick hardwood lipped doors and 32mm thick division panels in a wide range of finishes.
